No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                     Score

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This invention relates to a novel isolated, enriched or purified nucleic acid molecule that encodes a kinase polypeptide. Specifically, it relates to human tyrosine and serine/threonine protein kinases (PTK's and STK's), as well as protein kinase-like enzymes. The present invention describes screening methods to identify agonists, antagonists and antibodies that can be used to modulate the activity or function of the mammalian kinase enzymes. As such, these compositions can be used for gene therapy purposes to treat diseases or disorders including cancer, immune-related diseases, cardiovascular disease, brain or neuronal associated disease, metabolic and inflammatory disorders. Accordingly, they exhibit cytostatic, neuroprotective, immunomodulator and antiinflammatory activities. This polynucleotide sequence is a human kinase DNA sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 3765

CC differentially expressed in response to steroid treatment. Also included care the following: a high throughput method for using a cDNA to detect differential expression of nucleic acids in a sample; and a high comparison of screening molecules or compounds to identify a cligand that specifically binds a cDNA. The sample is from a subject with cc disease. The high throughput method of screening molecules or compounds to identify a condentify a ligand that specifically binds a cDNA. The sample is from a subject with cc disease. The high throughput method of screening molecules or compounds to identify a ligand that specifically binds a cDNA comprises: combining the combination with molecules or compounds under conditions to allow specific binding; and detecting specific binding between each cDNA and at least one molecule or compound. The molecules or compounds are regulatory proteins. The combination is useful for preparing a composition for treating liver disorders associated with steroid therapy, e.g., cirrhosis or hepatitis. The present sequence represents a human cDNA which is differentially expressed in steroid-induced C3A liver cells. Note: The specification but was obtained in electronic format directly from USPTO or at sequence .html.

CC available in electronic form from the US patent office at CC ftp.seqdata.uspto.gov/sequence.html?DocID:2004034888. The polynucleotide CC of the invention are also useful in physical arrays of molecules and as CC plant breeding markers. The recombinant DNA construct is useful for improving plant tolerance to cold, heat, drought, herbicides, extreme CC osmotic conditions, pathogens or pests, for manipulating growth rate in CC plant cells by modification of the cell cycle pathway, for conferring CC increased resistance to plant disease, for producing galactomannan, CC lignin or plant growth regulators, for increasing the rate of homologous recombination in plants, for improving yield by modification of CC photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake CC or by providing improved plant growth and development under at least one Stress condition or for modifying seed oil or protein yield and/or CC content. This sequence represents a plant full length insert

The invention describes a recombinant DNA construct comprising a CC polynucleotide consisting of a sequence encoding an amino acid sequence available in electronic form from the US patent office at CC ftp.seqdata.uspto.gov/sequence.html?DocID:2004034888. The polynucleotide CC of the invention are also useful in physical arrays of molecules and as CC plant breeding markers. The recombinant DNA construct is useful for CC improving plant tolerance to cold, heat, drought, herbicides, extreme CC compartic conditions, pathogens or pests, for manipulating growth rate in CC plant cells by modification of the cell cycle pathway, for conferring CC increased resistance to plant disease, for producing galactomannan, CC recombination in plants, for improving yield by modification of conferring CC increased resistance to plant disease, for producing galactomannan, CC recombination in plants, for improving yield by modification of plant growth and development under at least one of provoviding improved plant growth and development under at least one stress condition or for modifying seed oil or protein yield and/or content. This sequence represents a plant full length insert
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    plant protectant; plant growth regulant; gene therapy; plant; recombinant DNA construct; physical array; plant breeding marker; cold tolerance; heat tolerance; drought tolerance; herbicide tolerance; extreme osmotic condition; pathogen tolerance; pest tolerance; growth rate; cell cycle pathway; dleease resistance; galactomannan production; lignin production; plant growth regulator; yield; plant growth; plant development; seed oil; protein yield; protein content; gene; ss.
                                                                                                                                                                                                                                                                                                                                                                             Claim 1; SEQ ID NO 26848; 15pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                             New recombinant DNA construct, useful for improving plant tolerance to cold, heat, drought, herbicides, extreme osmotic conditions, pathogens pests, for conferring increased resistance to plant disease, or for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             (LIUJ/)

The recombinant DNA construct is useful for CC improving plant tolerance to cold, heat, drought, herbicides, extreme CC osmotic conditions, pathogens or pests, for manipulating growth rate in CC plant cells by modification of the cell cycle pathway, for conferring CC increased resistance to plant disease, for producing galactomannan, CC lignin or plant growth regulators, for increasing the rate of homologous recombination in plants, for improving yield by modification of photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake CC or by providing improved plant growth and development under at least one stress condition or for modifying seed oil or protein yield and/or content. This sequence represents a plant full length insert content of the content can be used in the recombinant DNA construct of the

```
cc polynucleotide consisting of a sequence encoding an amino acid sequence cavailable in electronic form from the US patent office at ftp.seqdata.uspto.gov/sequence.html?DocID:2004034888. The polynucleotide cof the invention are also useful in physical arrays of molecules and as improving plant tolerance to cold, heat, drought, herbicides, extreme combinitions, pathogens or pests, for manipulating growth rate in conditions, pathogens or pests, for manipulating growth rate in increased resistance to plant disease, for manipulating growth rate in collinor conditions, pathogens for increasing the rate of homologous concerns or plant growth regulators, for increasing the rate of homologous recombination in plants, for improving yield by modification of contents or carbohydrate, nitrogen or phosphorus use and/or uptake continuition or for modifying seed oil or protein yield and/or content. This sequence represents a plant full length insert of the invention.

New isolated, enriched, or purified kinase nucleic acids and polypeptides, useful for diagnosing or treating, e.g. cancers, neurological and neurodegenerative diseases, cardiovascular dinflammatory disorders. disease,

ID NO 300pp; English.

This invention relates to novel isolated, enriched or purified nucleic cald molecules that encode kinase polypeptides. Specifically, it refers to a bioinformatics strategy used to identify mammalian members of the correct and lipid kinase families. The present invention provides methods correct and lipid kinase families. The present invention provides methods correct in a substance that modulates the activity of a kinase correct correction in a sample as a diagnostic tool for a disease or disorder.

CC Purthermore, it describes generation of a knock-out mouse whose genome is corrected by recombination at a nucleic acid sequence such that it corrected by recombination at a nucleic acid sequence such that it corrected by recombination at a nucleic acid sequence such that it corrected by recombination at a nucleic acid sequence such that it corrected by recombination at a nucleic acid sequence such that it corrected by recombination at a nucleic acid sequence such that it corrected by recombination at a nucleic acid sequence such that it corrected by recombination are useful for the diagnosis and treatment of cancer, corrected not previous system diseases, psychotic and neurological disorders, neurodegenerative diseases, metabolic disorders, they can be considered therapy purposes and compositions exhibit cytostatic, antimigraine, analgesic, endocrine-Gen., nootropic, tranquilizer, corrected, open that moderate and protective, antiparkinsonian, virucide, fungicide, antibacterial, antidiabetic, anorectic, antiarteriosclerotic, cophibalmological, antiallergic and gastrointestinal-gen. This column to that encodes a murine protein kinase of column column by the column column column column.

The nucleic acids CC and the protein kinases they encode may be used in the treatment and CC diagnosis of diseases associated with inappropriate kinase expression CC such as immune-related diseases and disorders, cardiovascular disease, CC neurodegenerative diseases and/or cancers. The nucleic acids and CC complementary sequences may also be used as DNA probes in diagnostic CC assays. The kinase polypeptides may be used as antigens in the production CC of antibodies of kinase expression and activity. Anti-kinase antibodies CC antibodies of kinase expression and activity. Anti-kinase antibodies CC expression and activity. Diseases related to kinase expression and CC activity include rheumatoid arthritis, atherosclerosis, autoimmune CC disorders, complications of organ transplantation, myocardial infarction, CC inflammatory powel disease, chronic inflammatory bowel disease, chronic confiammatory pelvic disease, multiple sclerosis, asthma, osteoarthritis, alterosis, asthma, osteoarthritis, alterosis, and reproductive discoars, rhinitis, autoimmunity, diabetes, cancers and reproductive

                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a compound comprising a sequence comprising 8-80 base pairs (Dp) targeted to a nucleic acid encoding MARK3 (MAP/microtubule affinity-regulating kinase 3), that specifically hybridises with the nucleic acid encoding MARK3 and inhibits expression of MARK3, i.e. is an antisense oligonucleotide (AO). Also included are a composition comprising the compound and a carrier or diluent, inhibiting the expression of MARK3 in cells or tissues, treating an animal having or suspected of having a disease or condition associated with MARK3 and screening for an antisense compound. The antisense oligonucleotide is useful for preparing a composition for treating hyperproliferative diseases e.g. Alzheimer's disease. The present sequence is a MARK3 associated CDNA included in the figures but not mentioned anywhere else in the
                                                                                                                                                                                                                                                                                                                                                  No.:

                                                                                    This invention relates to a novel screening method identified as a multice parameter high throughput screening (MPHTS) assay. Specifically, it crefers to an assay that utilises the disease signature of a plurality of specific genes associated with a particular disease, and identifies confict that disease and those chals taken from individuals conference by that disease and those that are not affected. The present invention then describes the screening of candidate pharmaceutical compounds to identify those that have a potential therapeutic benefit for the treatment of neuropsychiatric and neurodegenerative disorders concluding schizophrenia, bipolar affective disorder (BAD) and autism, as concluding schizophrenia, bipolar affective disorder (BAD) and autism, as concluding schizophrenia, bipolar affective disorder (BAD) and autism, as concluding schizophrenia, bipolar affective disorder (BAD) and autism, as concluding schizophrenia, bipolar affective disorder (BAD) and autism, as concluding schizophrenia, bipolar affective disorder (BAD) and autism, as concluding schizophrenia, and altidepressant. Furthermore, the screening concurrence of and antidepressant. Furthermore the screening compounds may be rapidly screened with a minimal amount of labour and compound confort. This polymucleotide is the cDNA sequence of a gene that is conformed conformed in an exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              25-SEP-2001;

and/or NRBP function. Preferred NRBP-modulating agents specifically bind to NRBP polypeptides and restore RAC function. Other preferred NRBP-modulating agents are nucleic acid modulators such as antisense oligomers and RNAi that repress NRBP gene expression or product activity. NRBP modulating agents may be evaluated by in vitro or in vivo assay for molecular interaction with an NRBP polypeptide or nucleic acid. Agents that produce a change in the activity of there assay system relative to controls are identified as candidate RAC modulating agents. The assay system may be cell-based or cell-free. NRBP modulating agents include NRBP-related proteins (e.g. dominant negative mutants and biotherapeutics), NRBP-specific antibodies, NRBP-specific antisense oligomers and other nucleic acid modulators, and chemical agents that specifically bind to or interact with NRBP or compete with an NRBP specifically bind to or interact with NRBP or compete with an NRBP specifically bind to or interact with NRBP or compete with an NRBP specifically bind to or interact with NRBP or compete with an NRBP specifically bind to or interact with NRBP or compete with an NRBP specifically bind to or interact with NRBP or compete with an NRBP specifically bind to or interact with NRBP or compete with an NRBP specifically bind to or interact with NRBP or compete with an NRBP specifically bind to or interact with NRBP or compete with an NRBP specifically bind to or interact with NRBP or compete with an NRBP specifically bind to or interact with NRBP or compete with an NRBP specifically bind to or interact with NRBP or compete with an NRBP specifically bind to or interact with NRBP or compete with an NRBP specifically bind to or interact with NRBP or compete with an NRBP specifically bind to or interact with NRBP or compete with an NRBP specifically bind to or interact with NRBP or compete with an NRBP specifically bind specifically bind
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence is that of cDNA encoding human nuclear receptor binding protein 2 (NRBP2). The inventors have discovered genes that modify the RAC GTPase pathway in Caenorhabditis elegans and identified their human orthologs as NRBPs. The invention provides methods for using these RAC modifier genes and polypeptides to identify NRBP-modulating agents that are candidate therapeutic agents that can be used in the transment of disorders associated with defective or impaired RAC function
                                                                                                         binding partner. The screening assay may be an apoptosis assay, a cell proliferation assay, an angiogenesis assay or a hypoxic induction assay. A method for diagnosing a disease, especially cancer, in a patient uses
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Identifying a candidate RAC pathway modulating agent using a nuclear receptor binding protein (NRBP) polypeptide or nucleic acid, useful for diagnosing or treating cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                WPI; 2005-417982/42.

The invention relates to polynucleotides (AAK51456-AAK53435) and the encoded polypeptides (AAM78323-AAM80302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polymucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity, inhibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammation. Note: Records for SEQ ID NO 2110 (AAK52581), 2111 (AAK52582) and 3666 (AAM80020) are omitted as the relevant pages from the sequence listing were missing at the time of publication
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           WPI; 200

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      음 성
                                                  treatment immune, in disorders
                                                                 The present invention relates to human protein kinase. The proteins are from new human genes termed h12832, h14138, h14833, h15990, h15993, h16341 and h2252. The proteins may be used to identify modulators of their activity. The proteins may also be used to derive products for the treatment of cellular growth related disorders, malignancies, cancers, immune, inflammatory, respiratory, haematological and bone-related
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human; protein kinase; cell growth; tumour; respiratory; haematological; bone disorder;
                                                                                                                                                                                                                                                                                        New protein kinase polypeptides, nucleic acids and anti-kinase antibodies, useful for diagnosing and treating e.g. cancer, inflammatory, immune, cardiovascular and bone disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      30-JUN-1999;

                                                                                           Cl length cDNAs defined in the specification. Where a primer set comprises:

(a) an oligo-dT primer and an oligonucleotide complementary to the Complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the combination of an oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence of complementary to a polynucleotide which comprises a 5'-end sequence, where the coligonucleotide which comprises a 3'-end sequence, where the coligonucleotide comprises a 3'-end sequence, where the coligonucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence's end sequence omplementary to a polynucleotide comprises at least 15 nucleotides and the combination of the specification. The primer sets can be used in antisense therapy and in the comprises at least 15 nucleotides and the combination of the specification. The primers are useful for synthesising polynucleotides, comparation and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs as allow obtaining of the full-length cDNAs as allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH13628 and comparation and an amino acid sequences; and AAH13629 to AAH13632 represent coligonucleotides, all of which are used in the exemplification of the present of the comprise of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Primer sets for synthesizing polynucleotides, particularly the 5602 full-
length cDNAs defined in the specification, and for the detection and/or
diagnosis of the abnormality of the proteins encoded by the full-length
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   27-AUG-1999; 99JP-00300253.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             foetal brain, foetal kidney, melanoma, testis and amygdala cDNA libraries. ABA93702 to ABA93766 represent human cDNA sequences from the present invention which encode the proteins given in ABB0562 to ABB05729. The human cDNA sequences and clones can be used in gene therapy. The clones may be used in a variety of applications, for example they may be used in profiling assays, for providing large arrays of human genetic material for implementing large-scale screening strategies and
